Zyad Ahmed fawzy.

What I had added to the C code of the connect4 game:

1. **I had added a linked list data structure to the code, which I used it to show to the both players the last moves of the opponent, I used some functions serves the linked list as (push , printlist ,delete).**

2. **In the original code of the game the players can add X or O to the columns even if it's fully completed, I fixed this point by counting the elements of each column.**
